Design Statement

The intent of this design is to take advantage of the homes large footprint by efficiently creating better use of the space, making the home more inviting, light and open, and to modernize and update the style of the home to better reflect the owner's taste.

Project Goals

Mr. and Mrs. Teuscher requested a remodel of their 4140 square-foot rambler in Bountiful, Utah. The home was outdated, dark, uninviting, and had the laundry room placed in the way of entering the kitchen. The basement had corridors that were too long and took up what could have been usable space. The overall floor plan had a poor layout and was not conducive for the owner's needs and desires.

Main Floor Furniture Plan

Main Floor Requirements

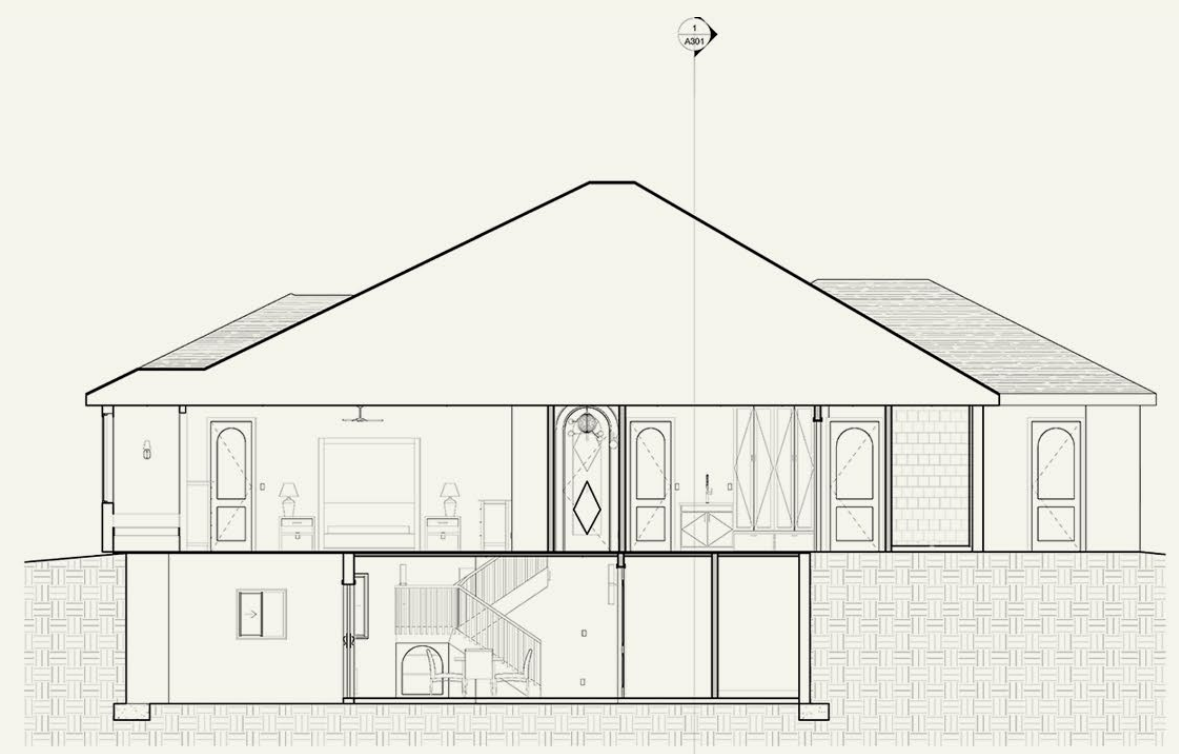

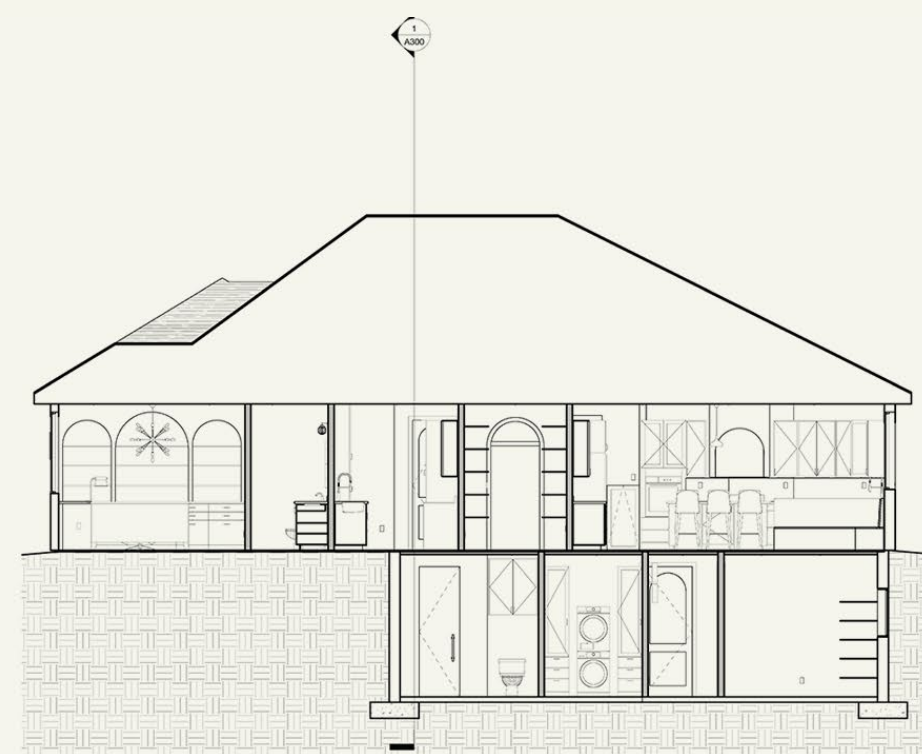

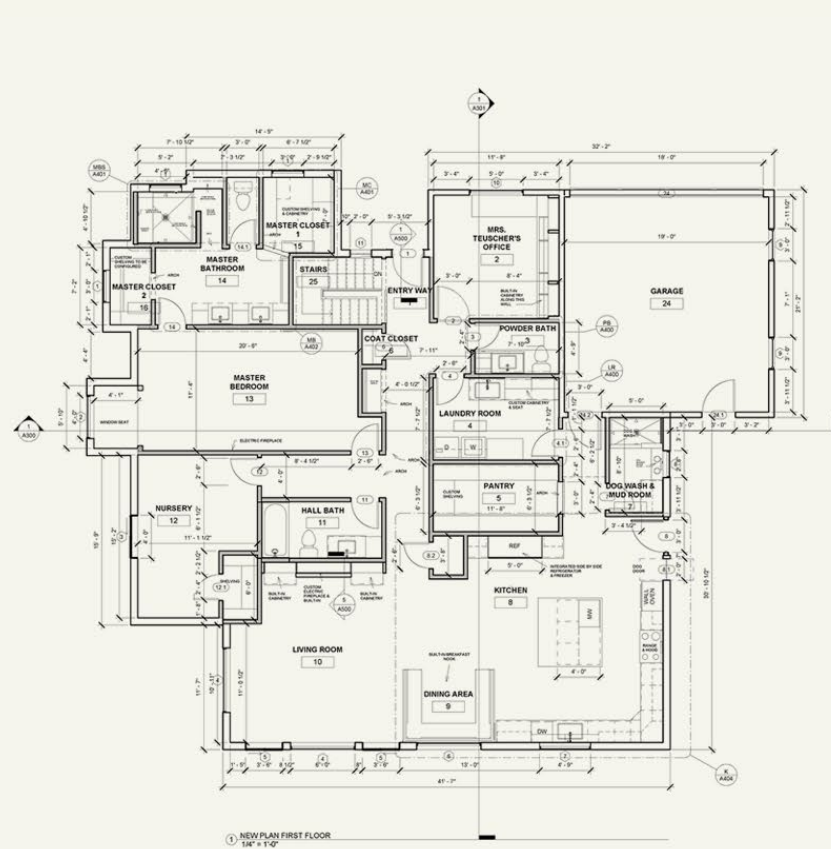

1. Office for Mrs. Teuscher off Entry Way
2. Powder Bathroom by her office
3. Separate Walk-in Closets in Master
4. Double Sinks in Master Bath
5. Two Shower Heads in Master Shower
6. Toilet Room in Master Bath
7. Nursery By Master Bedroom
8. Walk-in Pantry
9. Built-in Dining Area
10. Fireplace in Living Room
11. Large Sofa in Living Room
12. Coat Closet near Entry Way
13. Dog Wash Room
14. Doggy Door
15. Custom Range Hood
16. Wide Hallways

Basement Furniture Plan

Basement Requirements

1. Office /Library for Mr. Teuscher
2. Fireplace in Family Room
3. Game Table in Family Room
4. Room for a Sectional Sofa
5. Laundry Room
6. Guest Bedroom
7. Large Storage Room
8. Exterior Door
9. Wide Hallways

LITTLE MERMAID

CHILDREN'S PLAY AREA

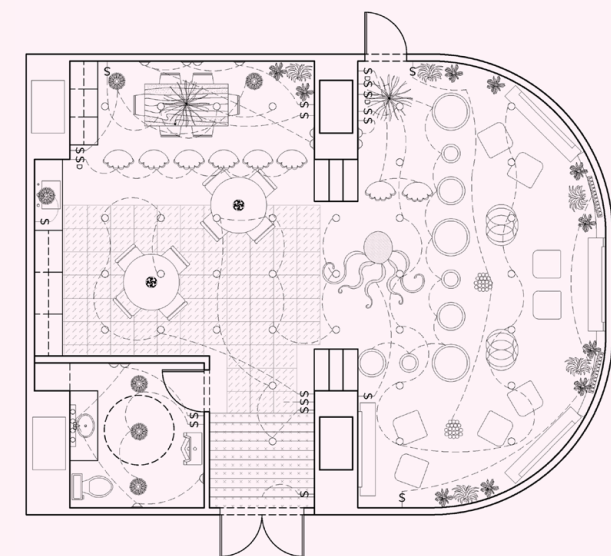

One of the main goals of this space was to create the ambiance of being under the sea and to make the children feel like they're in the Little Mermaid movie. The design integrates functional and creative lighting strategies to enhance the atmosphere of different activity zones, including video gaming, board games and snack areas.

A custom designed Ursula light fixture was developed to serve as a focal element and to add character throughout the space. The final design balances fun, spatial planning and delightful Little Mermaid themed design elements to feel like your under the sea.

The design for this cruise ship children's play area involved creating a dynamic and interactive lighting and interior design concept base on the Little Mermaid.

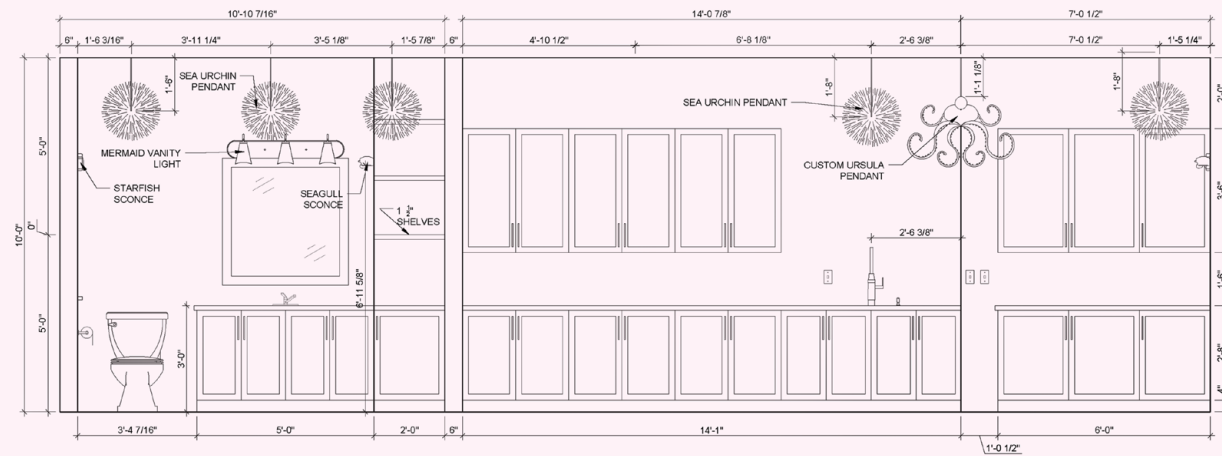

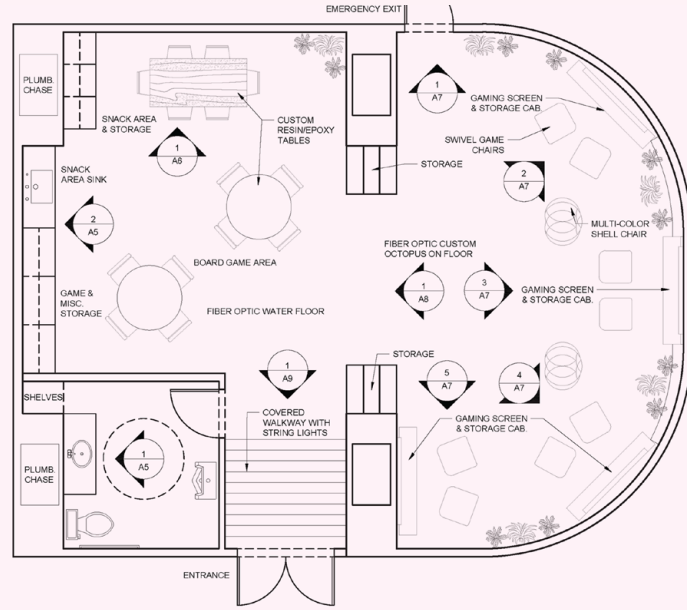

Our Little Mermaid theme is meant to be a fun and exciting space for children to come into. It's a welcoming space for teens and children on the cruise to be able to enjoy during their time on the boat.

1 A9 - MAIN ENTRANCE ELEVATION SCALE: 1/2" = 1'-0"

This is the restroom and snack area. We used colors that mimic the colors you would see in the movie. The bathroom is purple and teal. The toilet is a soft pink color and our vanity light is a mermaid light. The other lights in the bathroom include a teal sea urchin pendant, a star fish sconce and a seagull sconce. We have a pretty pink faucet and a turquoise sink.

The snack area has lots of storage, a sink area and an underwater mural on the wall.

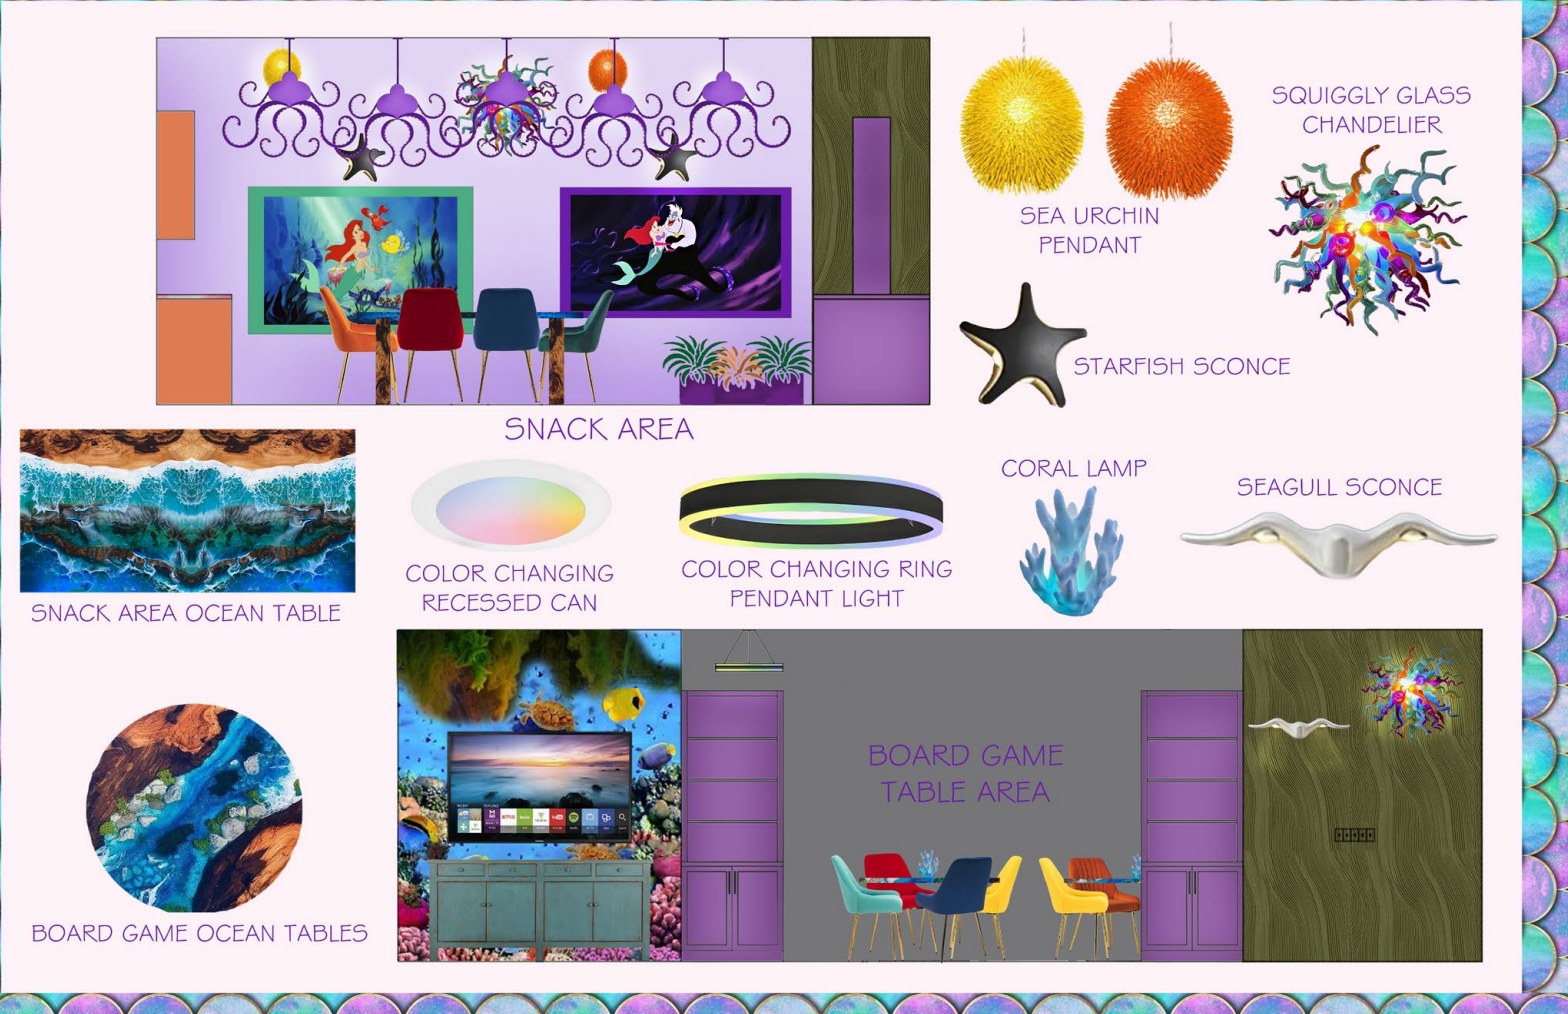

This is the gaming area which includes a gaming console and gaming chairs.

There's an underwater light hidden behind the baseboard area to add reflections of color onto the wall.

On the floor we have a fiber optic octopus light and carpet tiles.

When the children come in they'll walk underneath some hanging sea life string lights. They will then immediately step onto an LED floor which is meant to resemble being on the water.

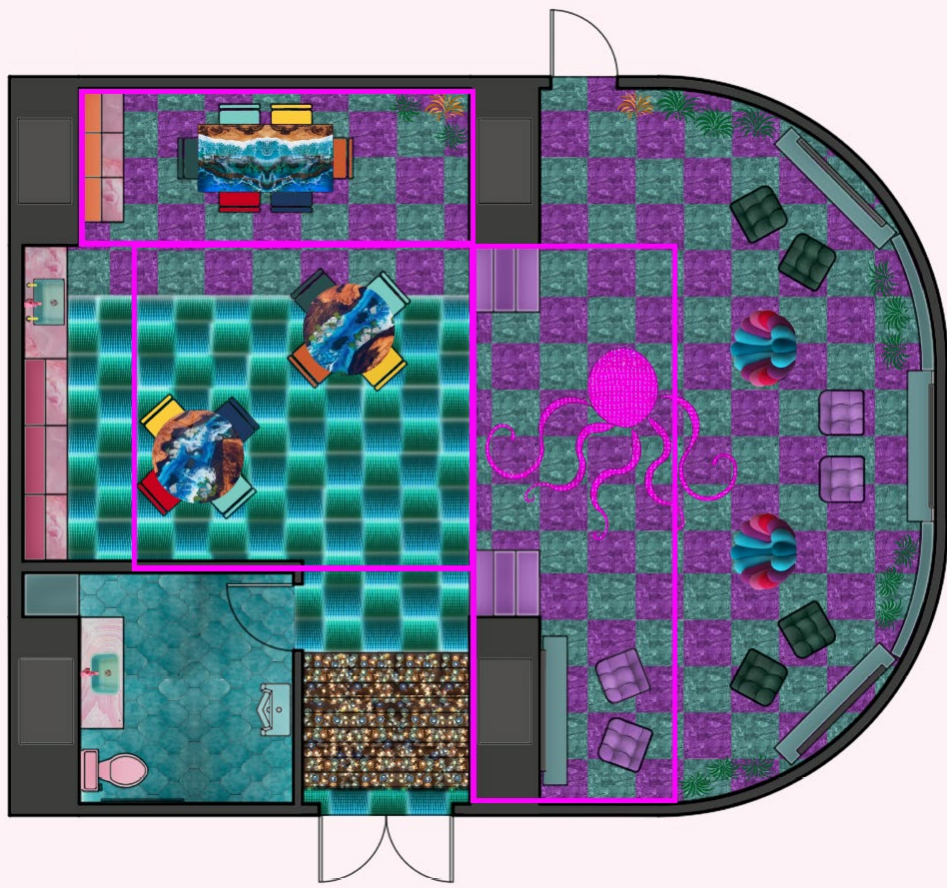

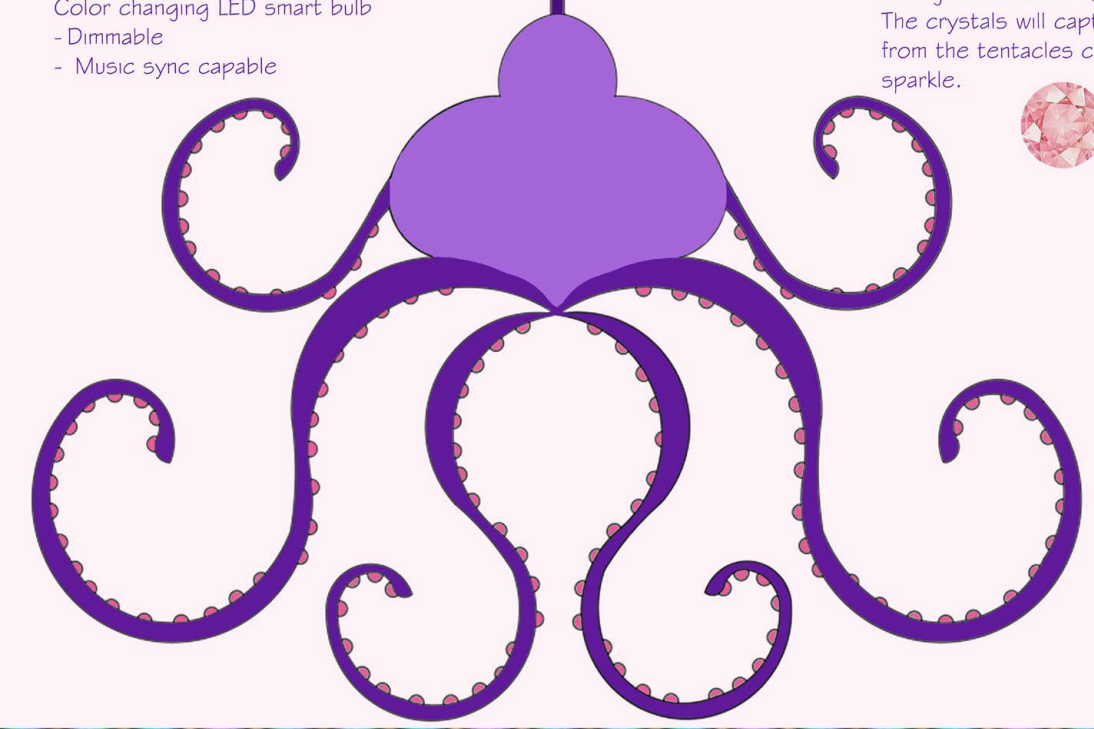

URSULA PENDANT

Head & body made from frosted blown glass
Color changing LED smart bulb
- Dimmable
- Music sync capable

Tentacles made from blown textured & frosted glass
Textured exterior to scatter light & add depth
RGB color changing LED strip lighting inside tentacles
- Dimmable
- Music sync capable

Pink glass suckers w/ pink crystals.
The crystals will capture light emitting from the tentacles causing them to sparkle.

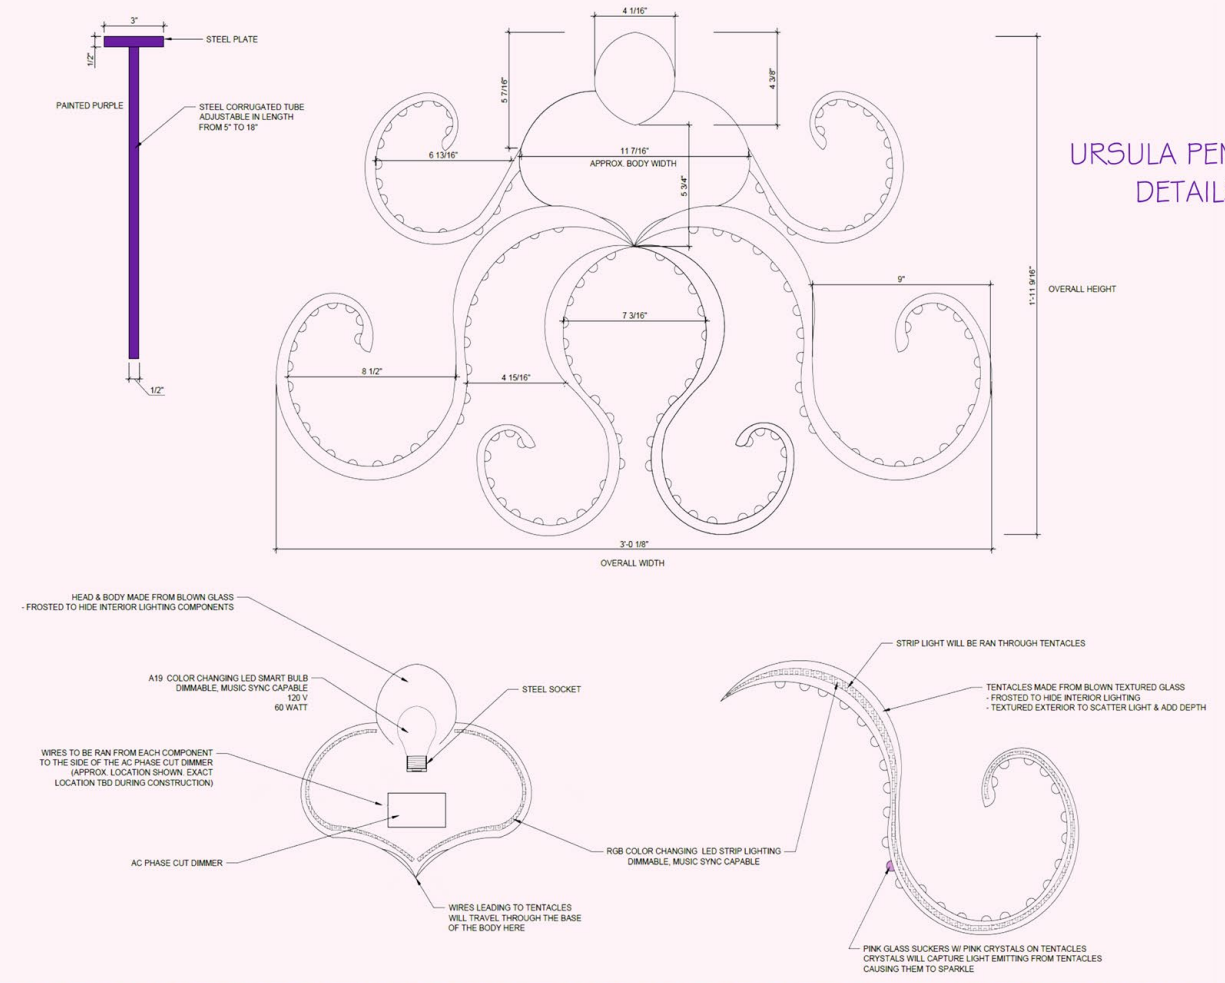

This is the board game area. We used colorful chairs and the tables are meant to look like your under the water.

We put a big long table on the back wall with the custom ursula pendants hanging above.

The purple cabinets are for storing games and books for the children to play and read.

URSULA PENDANT DETAILS

Tammy Hill has MS and had recently been bound to a wheelchair. This caused their home to be in desperate need of a remodel to make things easier for her to get around the home.

HILL RESIDENCE

There was a major need for ADA counters, sink areas, wide hallways and doors, cabinet systems for easy access, and a roll-in master shower to make it easier for Tammy to be able to move around the home.

GOLDING KITCHEN REMODEL

FLOOR PLAN

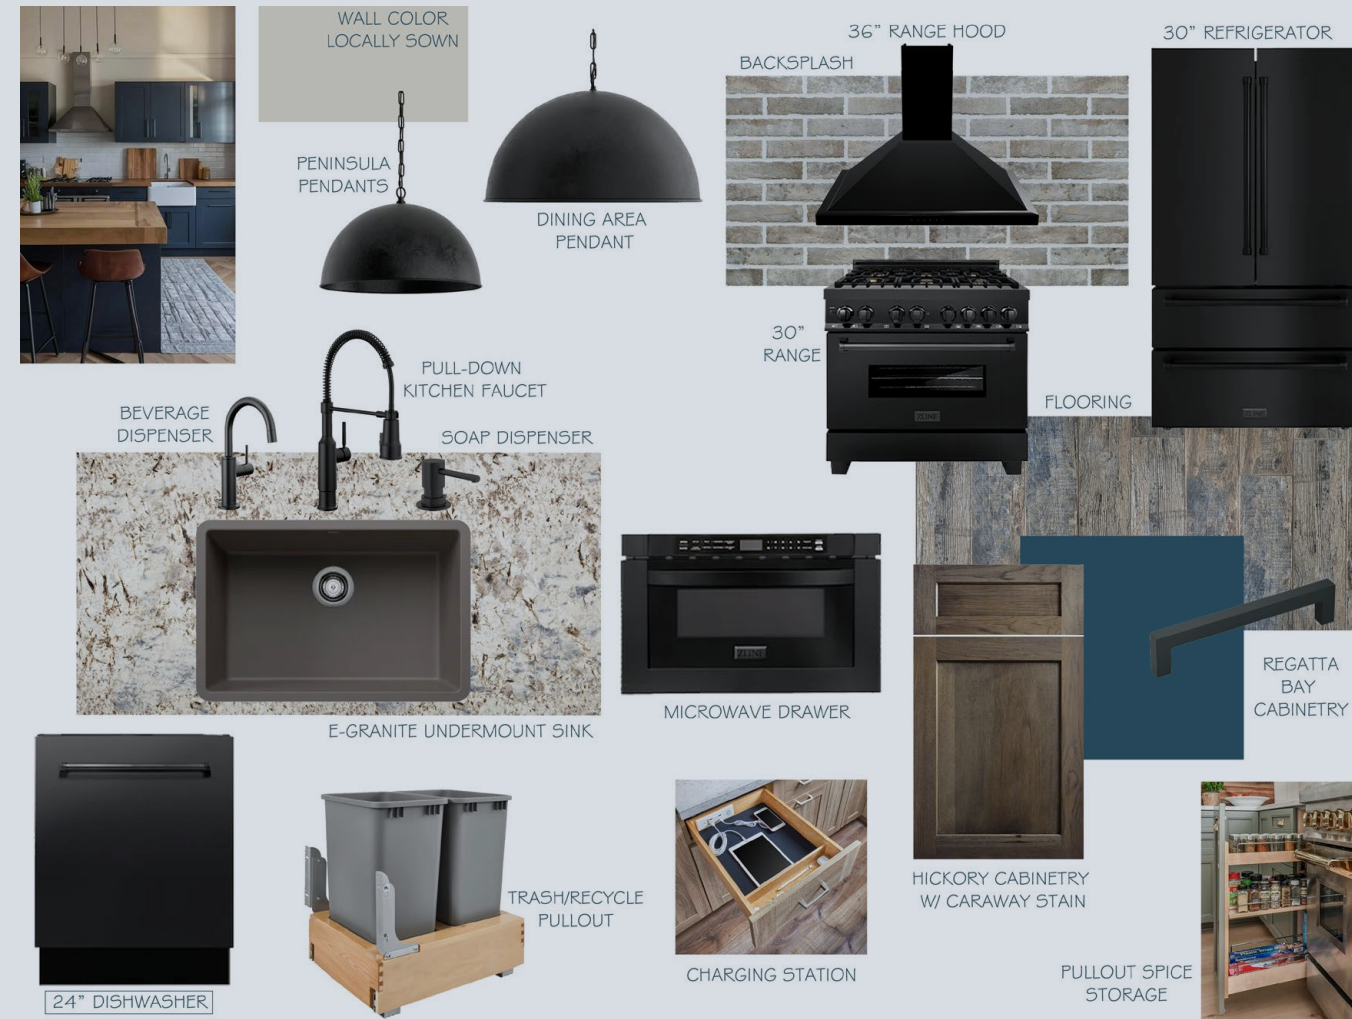

Ms. Golding is a single mother with young children. The goal was to make the kitchen area open and more useable and to create a good amount of storage, which she didn't have before.

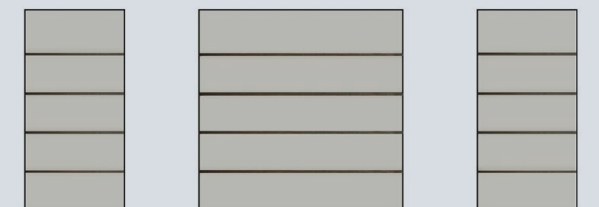

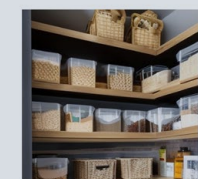

The U shape design of the kitchen space is intended to maximize the space while providing the family with a good amount of storage and usable space, all while creating an open floor plan.

The dining area will have built-in bench seating under the two windows to allow for more seating.

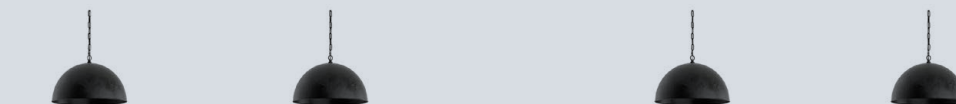

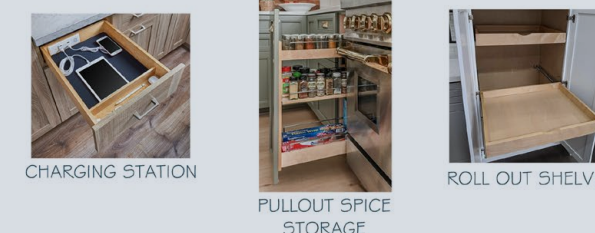

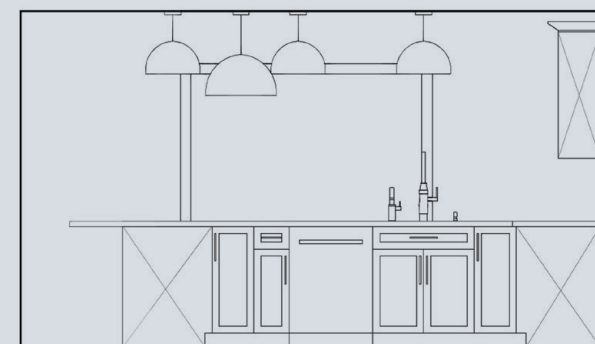

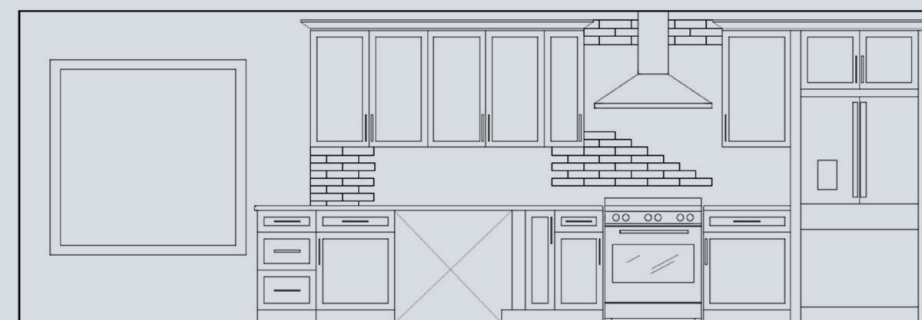

SELECTIONS

We included some cabinet inserts including a garbage pullout, spice rack, charging station, and rollout shelves for organization and easy access.

SOLSTICE & STONE HOTEL

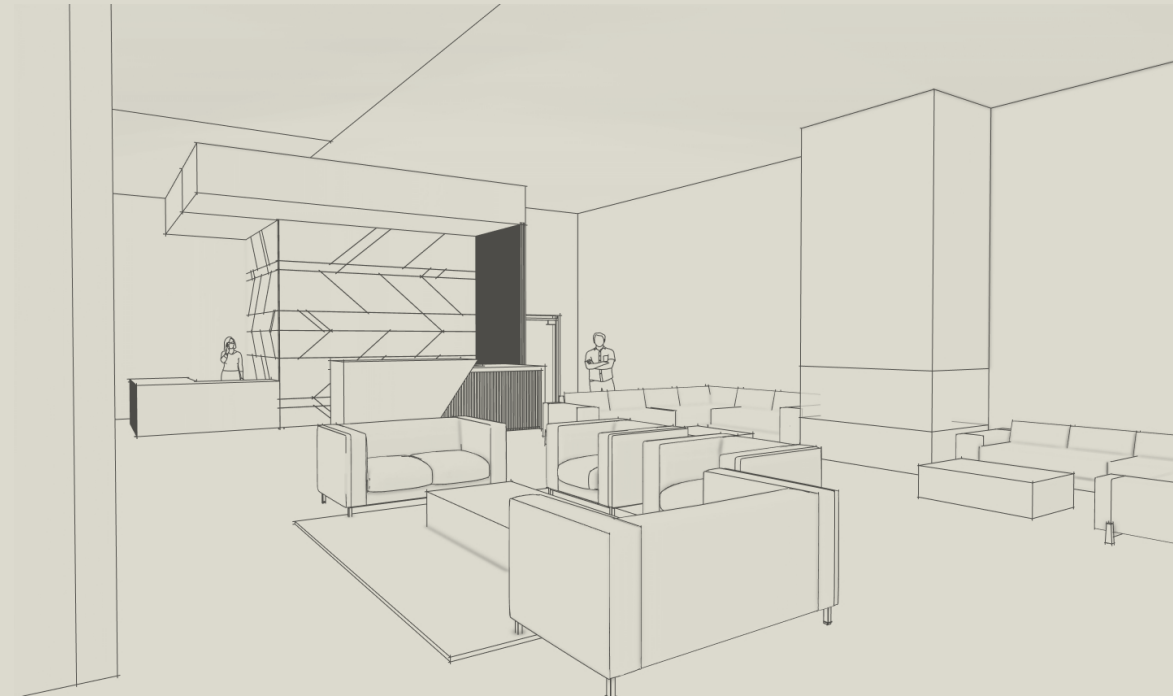

A boutique hotel with a Nordic inspired concept centered around warmth, material authenticity, and a feeling of calmness. The design blends Scandinavian spatial clarity with the tactile warmth and richness of a Nordic lodge. Rather than pursuing stark minimalism, the intent was to create a space that feels grounded, intimate, and quietly refined.

Solstice & Stone prioritizes atmosphere — using natural materials, layered lighting, and restrained detailing to shape an inviting guest experience. Our inspiration centers on natural light with floor to ceiling windows on each floor, vertical wood articulation and soft material layering. The intent was to create a hotel that feels residential in scale rather than overly commercial.

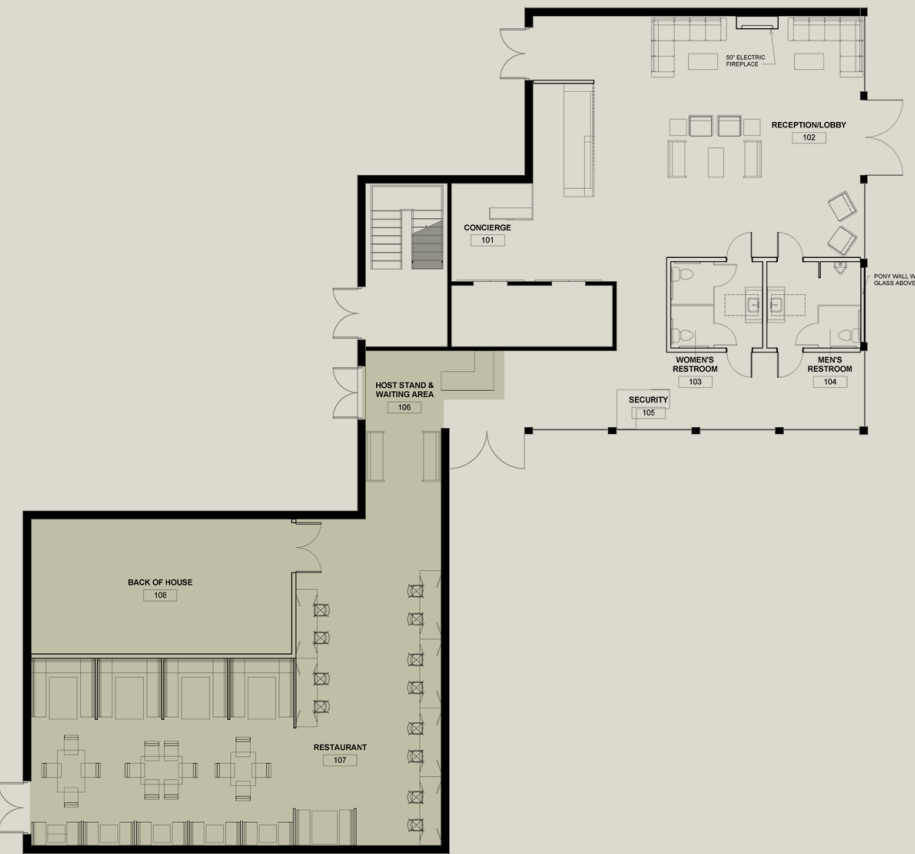

FIRST FLOOR LOBBY & RECEPTION AREA

The first floor planning strategy was to provide circulation and flow. The reception area lounge seating and restaurant functions are strategically positioned to maintain primary adjacencies while avoiding operational conflict.

FIRST FLOOR RESTAURANT

The restaurant is open and airy with its tall ceiling and high windows. The bar, booth and table seating is welcoming and intimate, while the restaurant back of house functions are discreetly integrated.

The lobby acts as the anchor, while the restaurant is positioned to create depth and spatial progression.

TV & BAR AREA
POOL TABLE AREA
PING PONG AREA

SECOND FLOOR GAMES LOUNGE

The second floor acts as a games lounge for the guests. It transitions into a social activation zone. Rather than isolating entertainment amenities, this floor is organized to encourage layered interaction.

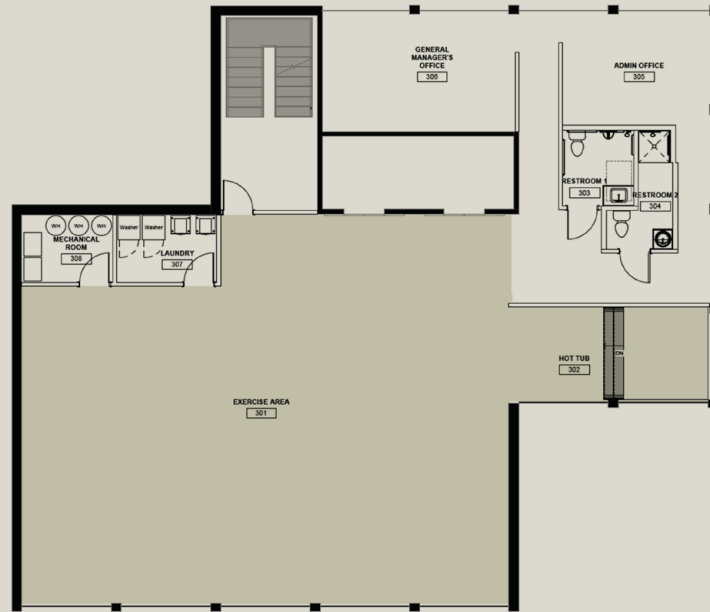

The bar anchors the space, with lounge seating, pool tables, a ping pong table, a pickle ball court and arcade games. The space maintains openness while preserving defined zones through furniture grouping rather than hard partitions.

ARCADE AREA

THIRD FLOOR

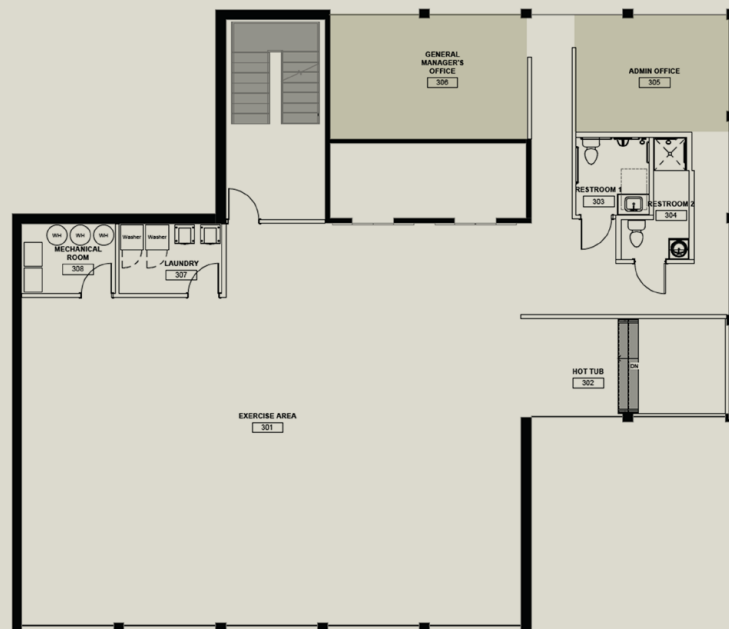

EXERCISE AREA

The exercise area is positioned to maximize daylight and exterior views. There are several different machines, weight benches and dumbbell racks to allow for use by multiple guests.

The hot tub area is surrounded by windows, but in it's own space for privacy.

The laundry and mechanical rooms are located in the far left corner as to not take up too much of the exercise area.

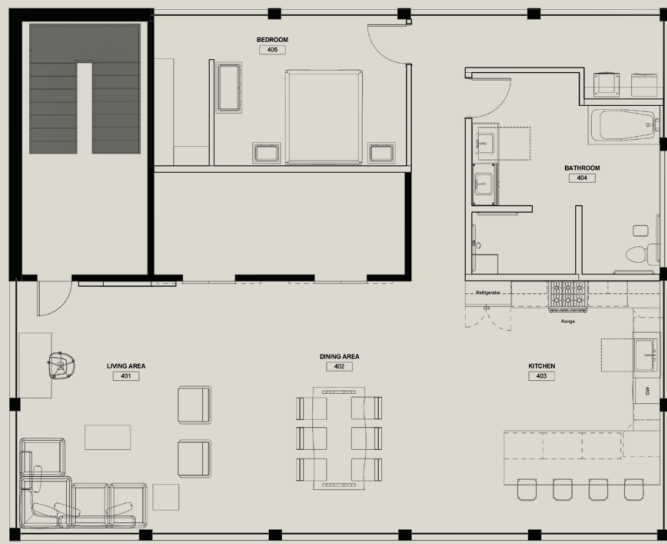

OFFICES

Hidden behind the elevators and restrooms are the office areas for the general manager and other admin staff. Administrative functions remain efficient yet discreet, maintaining operational clarity without disrupting the guest experience.

FOURTH FLOOR GUEST SUITE

The Guest suite accommodations are positioned to balance privacy, efficiency, and overall comfort.

The guest suite reflects a residential hospitality model. The living, dining, and kitchen areas are open yet proportionally scaled for comfort.

There's a nice amount of natural light coming in through the floor to ceiling windows in the living space and bedroom area which will light the space nicely.

The adjacency between private and public zones within the suite ensures both functionality and intimacy. The guest suites will provide everything a guest will need during their stay with a spacious living area, a full kitchen, and laundry. The bathroom has been designed to accommodate ADA needs with a roll in shower. We also included a tub for those who like to soak and relax.
